Appendix 2. Critical appraisal of LCAs (based on Drew, 2021)

Drew (2021) developed a critical appraisal *pro forma*, based on Weidema's guidelines for critical review of LCA (Weidema, 1997). This scoring system consists of 16 appraisal criteria, which are divided between the different phases of an LCA. It addresses a range of study quality indicators, such as internal validity, external validity, consistency, transparency, and bias. The percentage score provides an indication of the overall study quality. A higher score indicates a higher overall study quality. The points that can be obtained are displayed in the column labeled "appraisal criteria".

Appraisal criteria	Indicator(s)	Key effect modifiers	Grimmond (2012)	Grimmond (2021)	Hicks (2016)	McGain (2010)	McPhers on (2019)	Vozzola (2018) CC*	Vozzola (2018) IG**	Vozzola (2020)	Davis (2018)	Donahue (2020)
Phase 1: Goal & Scope (13 points)												
Study goal is clearly stated, including the study's rationale (1), intended application (1), and intended audience (1)	Transparency		2	2	2	2	2	3	3	3	2	3
Lifecycle assessment method is clearly stated (1)	Transparency	Process-based life-cycle assessment, which is well suited to product-level analysis, may underestimate environmental impacts (i.e. from truncation error); economic input-output lifecycle assessment (EIO-LCA), which uses aggregate data and is well-suited to sector-level analysis, may overestimate environmental impacts	1	1	1	1	1	1	1	1	0	0
Functional unit is clearly defined and measurable (1), justified (1), and consistent with the study's intended application (1)	Consistency		1	2	2	1	2	2	2	2	3	2
The system to be studied is adequately described with clearly stated system boundaries (1), lifecycle stages (1), and appropriate justification of any omitted stages (1)	Transparency; Bias	Assessments with narrow system boundaries that exclude a number of lifecycle stages are prone to underestimating life-cycle environmental impacts	2	2	2	3	2	3	2	2	2	3
The system covers production (1), use/reuse (1) and disposal (1) of materials and energy (half mark if only for energy and vice versa)	Internal Validity, Completeness		3	3	3	3	3	3	3	3	3	3
Phase 2: Inventory analysis (7 points)												
The data collection process is clearly explained, including the source(s) of foreground material weights and energy values (1); the source(s) of reference data (e.g. inventory database; 1); and	Transparency, Internal Validity		3	3	2	3	3	3	3	3	2	3

Appraisal criteria	Indicator(s)	Key effect modifiers	Grimmond (2012)	Grimmond (2021)	Hicks (2016)	McGain (2010)	McPhers on (2019)	Vozzola (2018) CC*	Vozzola (2018) IG**	Vozzola (2020)	Davis (2018)	Donahue (2020)
what data are included (e.g. production												
and disposal of unit processes; 1)				_		_		_	_	_	-	_
Representativeness of the data is	Internal		2	1	1	2	2	2	0	2	0	2
discussed (1), differences in electricity	validity;											
generating mix are accounted for (1),	External											
and the potential significance of	validity											
exclusions or assumptions is addressed												
(1)	_			_								
Allocation procedures, where necessary,	Transparency;		1	1	1	1	1	1	1	1	1	1
are described and appropriately	Bias											
justified (1; mark given if no allocation												
used)												
Phase 3: Impact assessment (6 points)												
Impact categories (1), characterization	Transparency		2	2	3	2	2	1	1	1	1	3
method (1), and software used (1) are												
documented transparently												
Results are clearly reported in the	Consistency;		1	1	1	1	1	1	1	1	1	1
context of the functional unit (1) (0.5 if	Transparency											
graphically, 0 if only normalized results												
reported)										1		
A contribution analysis is performed			2	2	2	2	2	2	2	2	2	2
and clearly reported (1), and hotspots												
are identified (1)										1		
Phase 4: Interpretation (9 points)												
Conclusions are consistent with the goal	Internal		2	2	2	2	2	2	2	2	2	2
and scope (1) and supported by the	validity;											
impact assessment results (1)	Consistency											
Results are contextualized through the	Internal validity		1	1	2	1	1	0	1	1	0	1
use of sensitivity analysis (1) and												
uncertainty analysis (1)												
Limitations are adequately discussed	Bias		0	1	1	2	1	1	0	2	0	1
(1), and the potential impact of												
omissions or assumptions on the study's												
outcomes are described (1)										1		
The assessment has been critically	Bias		1	1	1	1	1	1	1	1	1	1
appraised (i.e. peer review if journal												
article or independent, external critical												
review if report/thesis; 1)						1				1		
Source(s) of funding and any potential	Bias		1	1	1	1	1	1	0.5	1	1	1
conflict(s) of interest are disclosed (1),												
and are unlikely to be a source of bias												
(1)
