

Table 2. Characteristics of included studies – Glenn-shunt

Study	Participants (number, age, other important characteristics)	Comparison	Follow-up	Outcome measures	Comments	Risk of bias (per outcome measure)*
<i>Individual studies</i>						
Manlhiot, 2012	<p><u>N at baseline</u></p> <p>Intervention: 64</p> <p>Control: 75</p> <p><u>Age (at surgery)¹</u></p> <p>28 days (13-44)</p> <p><u>Sex²</u></p> <p>37% female</p>	<p><u>Intervention</u></p> <p>Thromboprophylaxis (aspirin, aspirin + enoxaparin, enoxaparin only, or warfarin ± enoxaparin lead-in only)</p> <p><u>Control</u></p> <p>No thromboprophylaxis</p>	3.5 years post-surgery	Thrombotic complications , defined as intravascular thrombosis (venous, arterial, or intracardiac including shunts), cardioembolic strokes, or pulmonary embolism	-	Very high (for outcome thrombotic complications)

**For further details, see risk of bias table in the appendix*

¹Age was only reported for the total study population

²Sex was only reported for the total study population
